📊 STB SmartTrader AI — Period Review (Coaches Brief)

Period: February 2 – 17, 2026

Prepared by: Fortuna (Claude Code CLI — Wealth Warden Trading Assistant)

Accounts Covered: All TradeZella data — 41 trades across 7 accounts + paper trading

> 📄 **This is the coaches brief.** The full document (`STB_export_20260221.md`) includes the complete day-by-day breakdown, strategy playbook, Inevitrade Scaling SOP, prop firm progression plan, and SmartTraderAI copy-paste review sections. Dive in whenever you want the full picture.

👋 Hello from Fortuna

Hi coaches — I'm Fortuna, Christopher's AI trading assistant, built on Anthropic's Claude Code CLI and living in his local file system. I'm not here to replace you. I'm here to make sure Christopher shows up to your sessions with his data already analyzed, his patterns already identified, and his mistakes already on the table — so you can spend your time coaching instead of catching up.

Every session, Christopher checks in with me on his mental state, the accounts he's trading, news events, and his goals. After each session, he feeds me his TradeZella exports and trade screenshots, and I evaluate every trade against the correct strategy framework — ZTH for his Apex and TPT accounts, Inevitrade SMC for his Lucid and Tradeify accounts, with STB's ICT principles as the foundational layer across everything.

I track discipline, flag rule violations, identify behavioral patterns across sessions, and generate SmartTraderAI-formatted reviews. This document is the output of that process for the period February 2–17, 2026.

Think of me as the teammate who never misses a session and never lets Christopher off the hook. You provide the expertise and human connection — I provide the data continuity and the accountability between your check-ins.

🎯 About Christopher

Christopher is a serious futures and crypto futures trader who works as a CNC machinist by day and trades before, during, and after work. He is enrolled in three complementary mentorship programs that together form his complete trading system:

- 📈 **ZeroToHero (ZTH)** — Structure and precision entry on 1H levels with 5M triggers. Currently his primary live strategy on Apex and Take Profit Trader evaluations.
- 📚 **SmartTradingBlueprint / ICT (STB)** — Deep ICT foundations (FVGs, Order Blocks, Liquidity, Power of 3, Kill Zones, OTE) applied as the "why" layer beneath every trade.
- 🏦 **Inevitrade SMC (IT)** — Smart Money Concepts with proprietary indicators (OG Oscillator), DCA mechanics (TCL), and reversal strategies (SMOG). Currently in backtesting — will go live on Lucid and Tradeify in Phase 2.

What makes Christopher coachable: he documents everything. Every emotion, every mistake tag, every "not an A+ setup" call is in his journal. There is zero denial in this dataset — he knows exactly what he did wrong. The gap is the behavioral override that happens in real-time when the stakes feel high. That's where coaching lands.

📐 How the Three Strategies Layer Together

```
SmartTradingBlueprint (STB) — The Foundation
ICT: FVGs · Order Blocks · Liquidity · Power of 3
→ The "WHY" behind every single trade
          |
   ┌──────┴──────┐
   ▼             ▼
ZeroToHero (ZTH)   Inevitrade (IT)
1H levels           Smart Money SMC
5M entry            EWT + Fibonacci
6 setup types       TCL · SMOG · 35A
Apex + TPT          Lucid + Tradeify
[LIVE]              [Backtesting]
```

STB explains the institutional logic. ZTH gives the precise entry framework. Inevitrade adds the DCA mechanics and reversal toolkit for the next phase of accounts. The goal: each strategy reinforces the others rather than conflicting.

🗂️ Account Status — February 2–17, 2026

Account	Platform	Status	Net P&L
Apex 100K Static — APEX-484839-01	Tradovate	💥 BLOWN Feb 9	-$617.50
Apex 100K Full — APEX-484839-02	Tradovate	💥 BLOWN Feb 12	-$1,125.00
Apex 100K Full Reset-1 — APEX-484839-03	Tradovate	💥 BLOWN Feb 13	-$3,080.00
Apex 100K Full Reset-2 — APEX-484839-04	Tradovate	💥 BLOWN Feb 13	-$3,080.00
TPT 50K — TAKEPROFIT635000920	Tradovate	💥 BLOWN Feb 17	-$1,042.50
TPT 50K Reset-1 — TAKEPROFIT401190651	Tradovate	💥 BLOWN Feb 17	-$2,210.00
Apex 100K Full Reset-3 — APEX-484839-05	**Tradovate**	✅ **ACTIVE**	**+$60**
TradingView Paper Trading	TradingView	Active	-$11,005 (sim)

📈 Performance Statistics

Metric	Value
Total Prop Trades	24
Winners	13 **(54%)**
Losers	11 (46%)
Total Gross Wins	+$5,432.50
Total Gross Losses	-$14,527.50
Net P&L	**-$9,095.00**
Average Winner	+$417.88
Average Loser	-$1,320.68
Win/Loss R Ratio	**0.32**
Best Trade	CL Short, Apex Full, Feb 12 (+$1,080) — ZTH Pivot

Worst Sequence	Feb 13 — 3 accounts blown in under 60 minutes (-$7,085)

> ⚠️ **The number that changes everything:** 54% win rate. Setup identification is NOT the problem. The entire -$9,095 loss is traceable to average losses being 3x average winners — caused exclusively by stop movement converting manageable -$200 to -$400 losses into account-ending events. Fix the stop movement behavior and this period looks completely different.

🔍 Behavioral Patterns — What the Data Shows

🔴 Pattern 1 — Stop Movement (80%+ of significant losses)

Every single account-ending trade has "kept moving stoploss," "moved tp & sl," or "bleed" documented in TradeZella. This one behavior is responsible for the majority of the -$9,095 loss. Examples:

- Apex Reset-1 (Feb 13): Original stop estimate ~$200–$400. Actual loss with stop movement: -$3,080. **Stop movement cost: ~$2,680 in a single trade.**
- Apex Static (Feb 9): Fixed $625 drawdown — any stop movement eliminated the entire buffer immediately.

Without stop movement, this period has a completely different outcome. The setups were good. The entries were often right. The exits were negotiated — and that's the entire problem.

🔴 Pattern 2 — Post-Win Overconfidence (The Dopamine Trap)

Date	Setup that worked	Immediate next action	Damage
Feb 12	CL +$1,080 (best trade of the period)	New ES position — emotional, not A+	-$3,000, account blown
Feb 13	ES +$1,075	New ES position (same minute, same direction)	-$2,000, account blown

The large win doesn't signal "I'm in the zone." It signals the dopamine circuit is activated and safeguards are about to be overridden. The mandatory 15-minute break rule after any win exists precisely because of this pattern.

🔴 Pattern 3 — Same-Day Account Resets (Funding the Spiral)

On Feb 13, two accounts were reset and blown within 45 minutes of each other. Opening a fresh account while emotionally compromised does not reset the

emotional state — it funds a second, third, and fourth attempt at the same bad trade. New rule: **no account resets on the same calendar day as a blowup. Minimum 24-hour wait.**

🟡 Pattern 4 — Pre-Session Bias Not Established (Paper Trading)

17 paper trades, 2 wins (11.8% win rate). "Ignored bias" tagged on 6+ trades — trading long in confirmed downtrends and vice versa. The 1H directional map is not being built before entries. This is a mandatory pre-session step going forward, not optional.

🟢 What IS Working

- **54% win rate** on prop firm accounts — the setups are real, the edge exists
- **Feb 10–11** (+$2,120 combined, 7 trades, 6 wins) — clean, disciplined, emotionally stable execution
- **Honest, detailed self-documentation** — every mistake, every emotion, every tag is in the journal. No denial. That level of self-awareness is the foundation everything else is built on.
- **ZTH Pivot setup** — the most consistent winner when applied correctly (Feb 10 CL +$360, Feb 11 NQ +$480/+$500, Feb 12 CL +$1,080)

💡 The Breakthrough Insight — Feb 11 vs. Feb 13

This is the most important thing that came out of this period's coaching conversation. After submitting this report to SmartTraderAI, Christopher reviewed his Feb 11 screenshots and said:

> *"The first trade I saw it working against me and left early with profits. The second trade I saw it was exhausted and took profits. The third trade, same deal — I saw a FVG and left early to secure profits. Wow — if I am not seeing a pattern between discipline and risk management being what actually yields long-term success."*

STB AI's response identified exactly what Feb 11 was:

Feb 11 (+$1,185 — 3/3 wins)	Feb 12–13 (-$10,085 — blown accounts)
Watched price action and structure	Watched P&L, not structure
Price against me? Exited with profit intact	Price against me? Moved stop wider (hope)
Setup looked exhausted? Took the win	Setup failing? Held longer (denial)

Saw a FVG? Locked it in	Loss expanding? Kept adjusting (ego)

On Feb 11, Christopher managed trades in real-time based on what *price was telling him.* On blown days, he negotiated with the market instead. He *left early on all three trades on Feb 11* — and that conservatism produced the cleanest, most profitable day of the period.

The Mental State Connection

STB AI asked what was different about Feb 11 morning. Christopher's answer:

- **Sleep:** Worse by Feb 13 — staying up late after the Feb 11 high had eroded rest between sessions
- **Stress:** External financial pressure (debts, family responsibilities) compounded with each session — the opposite of trading from a "bubble" as STB's trading psychologist recommends
- **Pressure:** Trading to recover losses rather than from a neutral state by Feb 13
- **Food/Appetite:** Normal eating on Feb 11. Not hungry, then overeating by Feb 13.
- **Emotional state: Calm and confident on Feb 11. Rushed and anxious on Feb 13.**

The external environment degraded between those two days and the trading reflected it directly. Recreating Feb 11 starts with recreating those conditions — not just reviewing setups.

🎯 This Week's Focus (Apex Reset-3 — APEX-484839-05, currently +$60)

Trading Rules

#	Rule	Why It Exists
1	**Zero stop movements**	The single behavior responsible for most of the -$9,095
2	**15-min break after any win**	Dopamine circuit breaker — prevents Feb 12/13 pattern
3	**30-min break after any loss**	Prevents revenge trading
4	**No same-day account resets**	24-hour minimum — resetting funds the spiral

5	**Max 2 trades per day, micros only**	MNQ, MES, MGC — limits damage surface during rebuild
6	**4:00 PM ET hard close**	Eliminates desperation trades
7	**Pre-session check-in with Fortuna**	No trading below 7/10 mental state rating

Weekend Study Plan

- Complete STB Module 1 — notes and review
- Backtest 20–30 ZTH Pivot and Break & Retest setups on NQ and CL (TradingView replay)
- Mark 1H key levels before 9:00 AM ET every weekday morning

🚀 Prop Firm Progression Plan

One account at a time. No stacking until the current phase is earned.

Phase	Target	Strategy	Status
Phase 1 — Now	Pass Apex 100K Full Reset-3	ZeroToHero + STB	🔥 Active — +$60
Phase 2 — Next	LucidFlex Evaluation	Inevitrade + STB	📋 After Apex pass
Phase 3 — Future	Tradeify Select Challenge	Inevitrade + STB	📋 After LucidFlex funded

Why LucidFlex for Phase 2? One-time fee, no Daily Loss Limit, scaling plan that rewards consistency over time — and IT/SMC strategies are a natural fit for its structure. Christopher's Inevitrade coach is already familiar with LucidFlex.

Why Tradeify for Phase 3? No consistency rule, 3-day evaluation, and after passing: option for Select Flex (no DLL) or Growth Challenge. Note: Tradeify requires at least **one trade per calendar week** to keep the account active — this rule does NOT apply to Apex or TPT.

🤖 How Fortuna Works Between Your Sessions

Here's what happens between Christopher's check-ins with you:

1. **Pre-session** — Christopher rates his mental state (1–10), I check the economic calendar for high-impact news, and we confirm whether

conditions are right to trade
2. **During session** — Christopher is able to share a screenshot(s) of his trade idea to Fortuna and SmartTraderAI prior for feedback prior to taking a trade
3. **Post-session** — He drops his TradeZella CSV onto an Automator app that runs our Python pipeline, pushing trade data directly to the STB Google Sheet
4. **Analysis** — I evaluate every trade against the correct strategy framework, flag rule violations, and identify patterns across sessions
5. **Export** — I generate period reviews like this one, formatted for SmartTraderAI and shareable with all coaches

You'll always have access to the full trade data, pattern analysis, and Christopher's self-documented emotions and mistake tags — before your next session with him. No catch-up required.

The Mantra we'll building toward:

> *"Discipline and risk management yield long-term success. I secure wins early. I accept losses at my stop. I never negotiate with the market."*

Let's build it together. 🤝
