PRO Account Rules

How to Keep Track Of Your Drawdown

Resetting A PRO Account

PRO Account Rules

Vlada
6 months ago · Updated

Here you will find all the rules for PRO accounts. This will all be in the PRO contract we send you as well.

1. No Trading bots/Algos

- We do not allow any automated or bot trading of any kind.
- All trades must be manually executed by the trader.

2. Avoid the Limit Up/Down

- **Understanding Market Price Limits**
 - Futures and related markets can reach *limit up* or *limit down* levels, triggering circuit breakers.
 - This limits how far the market can go in a single day.
 - Current daily price limits can be found on the CME website: [CME PRICE LIMITS](#)
- **Trader Responsibilities**
 - You must exit all open positions **before** a price limit is reached.
 - If the market approaches a limit, our company must "hedge" against traders holding positions near those levels.
- **Account Liquidation**
 - If a price limit is hit, and you have not exited your position, you will lose your PRO Account.

3. Trade your Account

- **Weekly Trading Requirement**
 - To keep your PRO Account active, you must trade at least **one day per calendar week (Sunday–Friday)**.
 - A **“traded day”** is defined as a day where at least one round-trip has been executed on any permitted instrument.
- **Purpose of This Rule**
 - Ensures traders remain active and do not keep capital idle or “squat” on a PRO Account.
- **Exceptions**
 - Life circumstances may prevent trading.
 - Contact support if you need a temporary exception.

4. No Counter Positions

- You cannot hold open positions in **opposite directions** within the same product or closely related products.
- This applies across **all account types**: Test, PRO, and PRO+.

5. Intraday Trailing Drawdown

- **How the Drawdown Works**
 - The Trailing Drawdown is calculated **intraday** using your **peak balance**, which includes realized gains and unrealized gains.
 - The drawdown trails intraday as your unrealized profits rise.
 - The drawdown will never exceed your starting account balance.
 - Maximum drawdown in PRO = maximum drawdown from your passed test.
- **Example**
 - For a **\$25,000 PRO Account**:
 - Drawdown = **\$1,500**
 - If unrealized profit reaches **\$1,000**, your minimum account balance rises to **\$24,500** in real time.
 - If you close the trade with a **\$500 realized gain**, your balance becomes **\$25,500**, but your minimum remains **\$24,500**.
 - You are now **\$1,000** away from hitting the drawdown limit.
 - The drawdown continues to trail profits **until** it reaches your starting balance; once it reaches that level, it no longer moves.
- **Account Liquidation**
 - If your account balance drops to the **Minimum Account Balance** at any time — through realized or unrealized losses — the account is immediately liquidated.

6. No Open Positions During Prohibited News

- **General Rule**
 - All PRO Accounts must be out of all open positions and have no open orders **one minute before, during and one minute after** any prohibited news event.
- **Prohibited News Events (All Products)**
 - **FOMC statements/announcements** Wednesdays at 2:00 PM ET (FED speakers, FOMC meeting minutes are allowed)
 - **Non-Farm Payroll (NFP)** Monthly, Fridays at 8:30 AM ET
 - **Consumer Price Index (CPI)**
- **In addition to these news events, the following news events are prohibited for specific instruments:**
 - **Crude Oil Inventories** → Prohibited product: *Crude Oil*
 - **Bond Auctions** → Prohibited products: *10-Year Note, 30-Year Bond*
- **How to Track Prohibited News**
 - Review news marked with the **red folder, USD currency**, on:
 - [forexfactory.com](#)
 - All required news events also appear on the trader calendar:
 - <https://takeprofittrader.com/user-info/calendar>
